EDUCATION

Northwest Nazarene University

Nampa, ID

B.S. in Computer Science GPA: 3.0 Credits: 103

Expected Graduation: May 2027

- **Relevant Coursework:** Machine Learning (in progress), Intro to Spatial Analysis, Linear Algebra, Parallel Computation, Algorithm Analysis (in progress), Database Design/Programming, Systems Analysis/Design (in progress)

TECHNICAL SKILLS

Languages: C++, C#, Rust, Python, SQL, TypeScript, JavaScript, HTML/CSS, Dart

Technologies: Next.js, Flutter (basic), Axum, PostgreSQL, Docker, CUDA, ArcGIS

Tools: Git, GitHub, VS Code, Visual Studio, DataGrip, Microsoft Loop

Concepts: Machine Learning Fundamentals, Spatial Analysis, Full-Stack Development, Relational Databases, Parallel Computation

RELEVANT EXPERIENCE

Relevant Academic Experience

Ongoing

Northwest Nazarene University

Nampa, ID

- Developing a foundation in machine learning methods, data preprocessing, model evaluation, and computational analysis through upper-division CS and mathematics coursework.
- Gained exposure to spatial data workflows, geographic analysis, and ArcGIS-based tools through Intro to Spatial Analysis.
- Studied relational modeling, schema design, querying, and data organization in Database Design/Programming.
- Built analytical fluency through Linear Algebra and Algorithm Analysis, supporting machine learning and technical problem-solving.

Collaborative Development Experience

Ongoing

Academic and Independent Team Projects

Nampa, ID

- Worked effectively in team settings using shared GitHub repositories for version control, collaborative development, and coordinated project iteration.
- Used Microsoft Loop to organize shared planning, track tasks, and support communication across academic and technical projects.

PROJECTS

N-Queens Visualizer | *Next.js, TypeScript, Rust, Axum, PostgreSQL, Docker*

In Progress

- Designing and building a full-stack application to visualize the N-Queens problem with an interactive frontend and a performance-focused backend solver.
- Using Rust for efficient computation and Next.js/TypeScript for a responsive interface to configure runs and display results.
- Planning PostgreSQL integration to store run metrics and structured experiment data for later analysis.

Mobile and Collaborative Development | *Flutter, Dart, GitHub*

Ongoing

- Developing basic proficiency with Flutter and Dart through collaborative project work and cross-platform app exploration.
- Using shared GitHub repositories and team-based workflows to coordinate development and manage project iteration.
